The History of Access Irrigation

Access was started in 1958 by Mr Graham Pearce, an industrial chemist who had traded chemistry for the 'good life' running a small market garden in Crick, Northamptonshire. To try and get a better price for his strawberries, he designed an innovative glass and steel cold frame with sliding glass sides for easy access – hence our name Access.

Original drip nozzle

our horticultural irrigation systems.

The sandy soil at Crick caused low strawberry yields and it was decided to concentrate instead on selling the cold frame. Before the invention of the polytunnel, cold frames were a low cost way of growing under glass. As nurseries

and growers began to take up the cold frames with enthusiasm, attention was turned to providing irrigation inside the frames. Unhappy with the nozzles already available, Mr Pearce used his scientific background to design his own.

The invention of the polythene tunnel caused the company to refocus. Cold frames were then targeted at the keen gardener and the irrigation division was formed gation – still in its infancy in the UK

to supply growers with irrigation – still in its infancy in the UK.

Original cold frames at Crick

In 2001 the company launched its highly respected components catalogue, coupling professional quality components with helpful tips and advice.

From its horticultural roots, the irrigation division of Access focuses on 3 main areas: horticulture, landscape and more recently green systems including green roofs. All systems are designed to the same exacting standards of efficiency and durability as

the original site

The Access philosophy, instilled by Mr Pearce in the 1960's, has always been to provide innovative products coupled with good customer service. From advice to supply, Access are able to offer a fast, friendly service backed up by our own specialist design function and dedicated warehouse.

We are here to help.

Liquid Feeding

A pressure regulator must be fitted to all systems capable of delivering above the rated pressure. For fertilisers Water Regulations require a double check valve (see p45) in domestic situations or a pump and tank set for commercial use to prevent back-contamination.

Static Dilutors

Fill the Static Dilutor bottle with liquid feed, select the appropriate jet and connect to the water supply.

As water passes through the dilutor head it draws up a ratio of liquid feed which mixes with the water.

Designed to be filled, put near the tap, and then not moved until it is emptied. Max operating pressure 2.5 bar.

Capacity	Flow	Rate	Connector	Jets	Code	Price £
барасну	min	max	Туре	Supplied	Coue	FILEZ
			Brass	10:1		
9.0L	0.3m³/h	2.3m³/h	quick	25:1	ADS	70.00
2 gal	60 gph	500 gph	connector	50:1	(normal flow)	79.00
			& 'Geka'	100:1		

Mobile Dilutor

The Mobile Dilutor gives extra versatility. The liquid feed is kept inside an inner bag. This has a number of advantages, the unit need only be part filled, it can be moved from tap to tap without disturbing the final dilution rate and it can be left part-filled overnight.

A wider range of chemicals including those of a similar density to water can be used.

The bottle will withstand 4.0 bar pressure and is manufactured from heavy duty polythene.

Pressure	Flow	Rate	Jets	Code	Price £
FICSSUIC	min	max	Supplied	Goue	FILEZ
4.0 bar	0.3m³/h 60 gph	3.4m³/h 750 gph	100:1 150:1 200:1	ADMP	249.00
Snap connector conversion kit - allows Hozelock type fittings			ADM-FQC	17.00	

The ideal Dilutor where greater sophistication is useful.

Water in Water plus concentrate out concentrate out water fills space around collapsing bag

Capacity: 6.5L/1.4 gal. 'Geka' type connections are supplied as standard.

Multi-span Houses Lines can be linked together to a header pipe, with valves or solenoid valves to each line. Contact our

required, e.g. KU3-10

sales team.

The Access Mini-spin nozzle gives a very even level of distribution.

The bridge-less design has a rotating anvil which shatters the water into evenly spread particles. In comparison, the tiniest blemish or build up of lime on a fixed anvil nozzle gives permanently uneven distribution.

The nozzle fits at the end of a flexible dropper tube. In low tunnels the pipe lines can be above head height, yet allow the nozzle to remain at a height to ensure the best distribution pattern without "bounce back". Drip-stop valves are fitted to each nozzle. **Glue included**.

Supplied with 2.5m lengths of pre-drilled and socketed uPVC pipe, Access Mini-spin nozzles, drip-stop valves, downtubes (tunnels only). Entry 'Geka' hose fitting. Twin lines (3.0m/4.2m/4.5m widths are single line) include linkage pipework and on/off valves to each line. Fixings supplied: Wire strainers, straining wire and suspension straps (single line in tunnel has suspension straps to fix to ridge)

For 'Geka' hose tails see p15; Blanking plugs or shut off valves to blank off nozzles see p38

CNL Drippers

These 'state-of-the-art' drippers are designed for crops such as Strawberries where extremely high uniformity is required. The pressure compensated drippers also have a non-leakage device which 'locks' the dripper at the end of the cycle, preventing water drainage at the end of the cycle and the need to refill at the start of the next cycle.

Netafim PCJ CNL Drippers

- · Labyrinth design with maximum filtration area
- · Continuously self cleaning dripper
- · Silicon injection moulded diaphragm

Drippers are available in two operating pressures, with the HCNL having a higher shut off pressure, making them better suited to sloping sites.

Available as dripper only, or with 50cm or 80cm lead and Prevo 'S' stake.

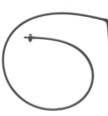

LCNL operating pressure: 0.7 - 4.0 bar

HCNL operating pressure: 1.5 - 4.0 bar

Ottima PC360

Compensated dripper – ideal for larger pots

The Ottima PC360 is a pressure compensated dripper making it ideal for larger pots and planters where more water is required. The Ottima sprays over a wider diameter than a traditional dripper, reducing water run-through on hanging baskets.

Watered area approx. 0.25m diameter.

Flow: 30 l/h. Pressure: 1.5 - 3.0 bar.

Connect onto a 16mm or 20mm supply pipe using small bore pipe – use P13-20M – see p27.

Requires 3mm punch – see p4; for a barbed connector into 16mm or 20mm pipe use DNIP - see above.

Qty	Code	Price £
10	DOF30-T	12.00
100	DOF30-H	105.00

Tree Watering Dripper

- · 8 l/h output for faster watering
- Simply punch dripper into 20mm pipe
- Pressure compensated

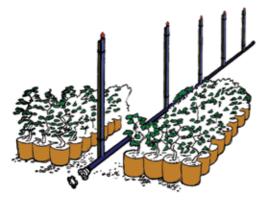

Netafim 8 I/h CNL dripper for precise, pressure compensated watering. Simply run a 20mm polythene pipe above the tree pots and punch in the dripper and fit the lead and anchorage stake.

Qty	Code	Price £
25	D8TD-Q	44.00
100	D8TD-H	170.00

Stock Bed Watering

This low cost watering system is ideal for watering large areas economically. Each stake set includes a riser pipe, fittings, sprinkler and straps to fit to the customers own stake (25mm square is ideal).

The medium kit will water an area up to 100m² (25m x 4m). Requires 3mm punch.

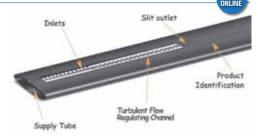

T-tape

One of the most popular drip tapes available in the UK, T-tape is ideal for larger scale field crops.

Tape Marking	Wall thickness	Dripper spacing	Output I/h per 100m	Reel Length	Code ~	Price £

TT16

T-tape for Glasshouses

Designed for row crops in tunnels each dripper is just 20cm apart. This low cost, thin wall system is ideal for flower crops and vegetable production.
 Select the parts you need in 4 easy steps:
 Buy one starter pack per system.

- Buy one header pack per bed. Add up the width of all the beds – you will need this much 16mm header pipe.
- 3 Total up how many runs you will have – you will need one entry fitting per row
- 4 Multiply the number or rows you have by their length to give the total meterage of T-tape you need.

Output @ 0.55 bar	5 l/m/h	Line spacing	0.3-0.45m or one per row
Operating Pres.	0.3 - 0.9 bar	Capillary beds	0.6m
Maximum length on 0% slope:	50m		

Pipe Headers

1 Starter pack

Contains filter, pressure regulator and punch. Includes both 'geka' and snap connectors. Can be fitted to the outlet of a 1/2" tap (this has a 3/4" thread) or can be put in the hose line. Includes a budget hand pump.

2 Header pack

Contains fittings to create a centre fed header, with 'geka' and snap connectors (p17). Does not include header pipe – use 16mm pipe. This will allow up to 400m of T-Tape to be used per bed.

Mist propagation produces high success rates, even with difficult specimens. Also provide bottom heat - cool tops and warm bottoms produce the best results!

Mist Wean Controller

- Extremely Reliable Controller
- Wean function built-in
- Easy to programme

The controller features 3 easy to use dials. The 'valve on' dial allows the burst length to be set. The 'delay' dial can either be set to 'off', in which case the mist will burst every time the wet leaf dries out, or it can be set to a minimum delay to allow for weaning. Finally the 'sensitivity' dial adjusts the sensitivity of the wet leaf.

For larger units, Heron panels with multiple wet leaf interfaces are available. Contact our Sales Department.

Overhead Kit - Single Bench

With Mist Controller, wet leaf, solenoid, wire, wire strainer, support straps, glue and fittings as shown. Bench not included.

Polyphosphate Descaler

Limescale is a major problem in irrigation especially in Mist Propagation units and drippers.

- · Simple Cartridge based system
- · Mounting bracket and spanner included
- · Easy Installation

How it Works

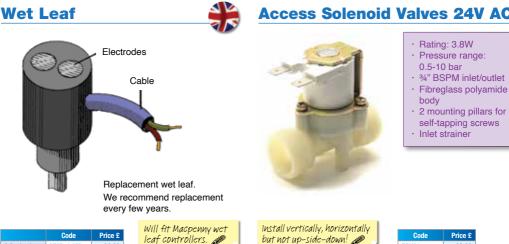

In 'hard water' areas Calcium precipitates out of the water supply causing scale build up on pipe walls, dripper outlets and plant leaves. Traditionally Nitric acid dosing is used to sequester the calcium, requiring large quantities of acid.

The polyphosphate descaler uses small quantities of long chain polyphosphates (derived from phosphoric acid) to act as a 'crystal modifier'. By modifying the crystalline structure these compounds will not precipitate into scale and actually stay in solution. Over time already deposited mineral scale deposits will also dissolve.

	Connection	Code~	Price £

Irrigation is vital if plants are to establish quickly, especially when conditions are warm and dry. Irrigation also ensures newly planted specimens have a far better chance of survival, and that plants and lawns in high traffic areas are able to recover.

As well as the components and kits available in this section, Access produce a companion catalogue - the 'Landscape Pocket Guide' which includes sample irrigation designs for small to medium sized landscape projects.

For larger projects. Access also have an experienced design department.

Border Watering Kit

Keep precious plants watered even in hot, dry spells with this border sprinkler kit.

The system consists of a black pipe running the length of the border, with spiked risers fitted as required.

Each riser has a choice of nozzle to suit the border width. Branching tees and elbows are included. Connect to an outdoor tap or a garden hose. Simple to install. Needs punch, see p4.

For smaller gardens

this kit will water an

efficient sprinklers.

every 2m.

Border Spray Watering Kit

- Gentle spray
- · Simply installs at the front of the border
- Can be automated

Designed to water a border up to 3m deep from the front, the kit is ideal for more established borders. The system uses sprinklers on small metal spikes up to 3m apart. 16mm black polythene pipe runs along the front edge of the border.

The sprinkler nozzles provide a very fine spray, so delicate plants are not damaged.

Connects to a garden hose or a tap. Minimum pressure: 2.1 bar. Requires DB valve (p27) to comply with domestic water regulations.

Covers up to 30m² (12.5m x 2.5m wide)

Popup Border Spray Kit

- · Gentle spray on 300mm riser
- · No pipework visible
- Can be automated

Designed to water a border up to 3m deep from the front, the system uses pop-up sprinklers that **rise 300mm out of the ground** when watering. A single trench along the front of the bed contains all of the pipe and the sprinklers, eliminating unsightly pipework on the bed.

The sprinkler nozzles provide a very fine spray, so delicate plants are not damaged.

Fits to a garden hose, a tap or an underground valve box (p23). Minimum pressure: 2.1 bar. Requires DB valve (p27) to comply with domestic water regulations.

Border Drip Kit

Drip irrigation is the most efficient and unobtrusive way of watering beds, with water dripping directly into the soil. The drip line is brown to make it as unobtrusive as possible, although it can be covered with a mulch to make it invisible.

The Permadrip drip line is made from a thick walled polythene pipe with commercial grade pressure compensated drippers spaced every 0.5m for even coverage. Simple to install.

The kit can either be connected directly to an outdoor tap, or can be connected to a hose with a standard quick connector. Requires DB valve (p27) to comply with domestic water regulations.

Reduces plant losses
Can be automated

reduce plant losses.

Hedge Drip Kit

Dripline Starter Pack

Allows dripline to be easily connected to an outside tap or to a hose using a snap connector. For beds supplied using underground pipe, the threaded fitting can be connected to a compression fitting. The kit also includes a stop end connector and a straight connector in case plain pipe (see p40) is being used to connect from the tap to the border

 Code
 Price £

Your Questions

Answered

How far apart do I space Permadrip?

Space runs 0.6m apart. Use the 0.3m spacing Permadrip for providing extra water around trees. Bending radius, 18cm.

How much do I need?

Work out the area of the beds (in m²) and double. This is how many metres of 0.5m spaced Permadrip you need.

How much can I use?

It depends on your water supply. Measure your supply in *l*/hr (see p37). Divide this by 3.2 for 0.5m spacing (5.3 for 0.3m spacing) this is how many metres you can run at a time.

What about Water Regulations?

For house gardens you can run Permadrip on the surface if you add a DB valve. See p27.

How long should I run it for? Approximately 30 mins per day in dry weather or one hour three times a week.

Operating range:	0.8-3.5 bar
Nozzle Output:	1.6 l/h
Maximum length (0.5m):	165m

Underground Valve Boxes

For a neater installation, hide all of the control valves underground.

For warning label	
see page 44. 🏉	
	1

3 Simple Steps

 Select Valve Chambers
 Choose one or more valve boxes to bring water to the various areas of the garden. If you are having a battery powered controller, choose a battery valve box.

 Choose Controller Choose mains or battery powered controller to suit your needs.

3 Select Cable

If the controller is remote from the valve box, measure how much cable is needed to run from the controller location to the valve boxes.

Controller not included - see pages 28-29

Battery Price £ Mains Price £ 2 zone EPAV02 210.00 EPAB02 170.00 4 zone EPAV04 320.00 EPAB04 240.00

Tap Link Kit for Valve Boxes

The kit consists of a 2-way brass manifold that screws onto the outdoor tap – allowing the tap to still be used for filling a watering can or connecting a hose. On the other outlet of the manifold 25m of underground pipe runs from the tap position to the valve box.

Tap and backplate are not included.

Pipe Size Code Price £ 20mm x 25m STK20 79.00

Tap Manifold

Border Link Kit

The Border Link Kit allows up to 4 separate beds to linked back to either a valve box or an outside tap using underground pipe. The kit can supply water to either border drip kits or border sprinkler kits. By

linking the beds together underground the irrigation system becomes much less obtrusive and is easier to automate.

The kit consists of 25m of underground supply pipe, 4 take off points (one for each bed) and connections

for either a standard garden tap or to an underground valve box.

A simple way of fitting manifolds to the tap, kits will suit battery operated controllers or mains powered controllers. Includes valves and link pipe but not tap or controller. DB valve option provides compliance with the Water Regulations for dripline in house gardens.

Inlet: ³/₄" F Outlet: ³/₄"M or 1"F

The ideal way to water baskets and tubs

- · Easy to install
- Unobtrusive pipework
- · Ultra-low flow dripper for reduced run off
- · Top quality nozzles for reliability
- Can be automatic

Hanging baskets and planters enhance any property, but are a nightmare to water. Now, with this easy to install system, everything can be watered with the turn of a tap.

The Access dripper kit uses an ultra-low flow dripper for reduced run off from the basket. The pressure compensating nozzle ensures that the output is the same whether the drippers are at eaves or ground level. It also allows 6mm piping to be used. This is only pencil thick and is black for long life. Pipe clips with masonry nails are supplied to fix to brick or timber. An adaptor enables the system to be connected to the outlet of your tap. For completely automatic watering see p28.

DB Valve	EVDB3	178.00
Fixing Kit	EVDB3KT	4.00

The fixing kit includes: fixing bracket, small bore pipe connectors.

Hanging Basket Feeder

Feeding baskets has always been a problem, especially as the small compost volumes of a basket and the regular watering required conspire to rob the plants of the nutrients they need.

The feeder is connected to the irrigation pipework. Inside is a slow release fertiliser which feeds every time you water. Two cartridges should last a season and the first cartridge should be replaced after 2 months.

Flow range:	1 – 200 l/h

Hunter Node Controller

Heron Multi-wire

The all-new Heron HM multi wire controller features a much larger display for easier programming and easy naming of individual zones.

One of the most dependable and sophisticated controllers on the market with optional rain sensors, flow monitoring and cellular remote control.

By adding a SIM, the unit can be controlled and programmed from your computer. Adding a flow meter then allows remote monitoring.

A sophisticated rain sensor measures rainfall in 1mm increments for precise control.

• Remote start

River and Lake Pump Package

Professional pump system

Designed for easy pumping from wells and rivers the package includes a DAB900X auto-start submersible pump, suspension kit, disc filter and 25m of pipe. Will handle moderately sediment loads. For dirtier water upgrade a floating inlet and to a semi-automatic filter (p36).

For fully automated irrigation using river water, pair up with a valve box (p23) and controller.

- · DAB900X auto-start pump
- · Isolator switch
- Stainless steel suspension chain
- 1" Disc filter and shutoff valve
- · 25m of 25mm MDPE pipe

Auto-start Submersible

Auto-start copes with	
water-out' situations	

Designed to cope with 'water out' situations, the pump will automatically stop if the water supply runs out, then periodically try to restart until the water supply returns. Built-in non-return valve. DAB650 and 900X require a buffer vessel to protect the pump. DAB55X is a variable speed pump so will cope with high and low water flows. Minimum flow: 120 l/h

Designed to boost the pressure of the water supply

- · Complies with the Water Regulations
- Simple to Install

These units are designed for systems where pressure is a problem or compliance with the Water Regulations is required. The units are pre-assembled and simply need to be connected to a power and mains water supply.

Pre-assembled Pump Unit

Designed for easy pump installation the pump is supplied mounted on a plate and pre-wired with a Genyo auto-start unit and to an isolator switch.

The auto-start unit brings the pump on as soon as a drop is pressure is detected.

Includes 1m of suction hose with 1" BSPF fittings to connect to an irrigation tank outlet.

Suitable for Lowara horizontal pumps – pump NOT included.

500L Pressure Booster Unit

Tank holds a buffer of water allowing the pump to operate at higher flows 610mm x 1060mm x 1330mm high Inlet: 3/4" BSPM Outlet: 1" BSPF

Head		Flo	w (m³/hr)
20m			4.1
30m			3.1
40m			1.65
Code ++	P	rice £	
EPTS0500	21	00.00	

Compact Pressure Booster Units

Designed for lower flows where compliance with the Water Regulations is required. The flow from the unit must be less than or equal to the flow into the tank.

2001: Ø 650mm x 1100mm high Inlet: 3/4" BSPM Outlet: 1"F

Pump	F	LOW (m³/hı	Code ++	Price £

Pump Relay

This reliable pump relay box provides a simple interface between pump and 24v AC signal from the controller. No low water over-ride. Lockable enclosure.

FLC Amps	Code	Price £
12	ESB1PH	210.00

Pump Isolator

Pump isolator is required for all pump installations. Single phase.

FLC Amps	Code	Price £
25	ESBI	51.00

Pre-assembled Tanks with Air Gap

Includes air gap to comply with water regulations, inlet ball valve, overflow, tank outlet with gate valve.

Inlet: 3/4" BSPM Outlet: 1" BSPF

Capacity	Ø x H mm	Code ++	Price £
200 L	650 Ø x 780	EPTS0200-TANK	461.00

Introduction

We only choose good quality fittings to put in our catalogue – we are often surprised at the poor quality parts that are around. To make life less complicated we tend to stock all the popular sizes – if you have a large requirement for something unusual please give us a call.

6333		Stuck without a	ruler? Use a coin!
	Contra la	5p = 18mm diameter	10p = 24mm diameter
	S	2p = 26mm diameter	£2 = 28mm diameter

Identification Tables

Thread Sizes

The O.D. of the thread and its size are different. For example a $\frac{1}{2}$ " thread has an O.D. of approx $\frac{3}{4}$ ".

BSP Thread	1⁄4"	3/8"	1⁄2"	3⁄4"	1"	1¼"	1½"	2"
Male thread OD mm	13	17	21	26.5	33.6	42	48	60
Female thread ID mm	11.5	15	18.6	24	30	38.5	45	57

Imperial Pipe

Like thread sizes, the O.D. and the pipe size are different. Wall thicknesses are denoted by its class. Black polythene pipe was generally class B, C or D. Rigid grey uPVC pipe was class C, D, E or T. We can supply adaptor fittings - please ask our sales department.

Pipe Size	3/8"	1⁄2"	3⁄4"	1"	1¼"	1½"	2"
OD mm	17.2	21.4	26.5	33.6	42.2	48.3	60.3

Metric Pipe

The pipe is measured by the O.D. Below 12mm diameter there are no standard sizes - so beware when matching small bore pipe.

Pipe OD mm	12	16	20	25	32	40	50	63
Blue MDPE water pipe (12 bar)			1	1	1		1	1
Black MDPE water pipe (10/12 bar)			1	1	1	1	1	1
Black LD/MDPE pipe (4/6 bar)	1	1	1	1	1	1	1	1
Grey uPVC pipe (5-16 bar)		1	1	1	1	1	1	1

Copper Pipe

Available in O.D. sizes 15, 22, 28, 35, 42 mm.

If you can't easily work out the OD of a pipe, wrap a strip of paper round and mark where it overlaps. This will then give circumference of pipe. Divide by pi (3.1428) to give pipe diameter.

Want to know your water flow?

Take a container of a known volume (e.g. 101) and time how many seconds it takes to fill with the tap 3/4 open (e.g. 20 seconds). Divide the volume by the time then multiply by 3600. e.g. $\frac{10}{20}$ (bucket size) x 3600 = 1,800 l/h $\cancel{20}$

Eindor Taper Fittings

We have been using these fittings for many years – the push fit design has been tested to 6 bar! Pre-packed in resealable, labelled bags. Easy to open, easy to identify. We try to be helpful!

12mm Connector

For 12mm OD poly. Bottom end fits 6mm F fittings eg KEP.

Qty	Code	Price £

Polythene pipe has a number of advantages over uPVC pipe (p46). It is less susceptible to frost damage, does not need solvents to join it and is more resistant to stone damage underground.

Choose pipe with a lower pressure rating for above ground work as it is more flexible. Choose 10 bar rated pipe for underground use where it is more difficult to spot leaks.

Underground Supply Pipe

- · 10 bar black MDPE pipe
- Thick wall for durability
- · High pressure rating
- Use compression fittings

Blue water pipe must only be used for potable underground mains water supplies, such as cold water feeds to storage tanks. It must not be used for irrigation water. Black pipe with a green stripe is available for recycled water systems.

Pipe Clamp and Spacer

Use round head 8/10 screws. (5mm screw hole in sizes up to 32mm. 6mm screw hole and locking clip in 50mm and 63mm)

Female Connector

Union fitting allows easy unscrewing. Built in washer.

Never use barbed fittings underground or at full mains pressure – they are cheap and cheerful but not as reliable as compression fittings. For larger sizes use compression fittings, p42.

Installer Approved!

Not only are these fittings WRC approved - our installers think they are the best thing around - and they have tried them all!

PoziLock Fittings

- · Positive sealing
- · Increased pressure resistance

Barbed fittings are a low cost way of connecting low pressure polythene pipe. However, their design means that, occasionally, they may drip. This does not matter on a border but, when clipped to a wall, it can look unsightly.

Jubilee clips look a mess and can damage the fitting – making the situation even worse – and high pressure compression fittings are very bulky.

Bowling Green Package

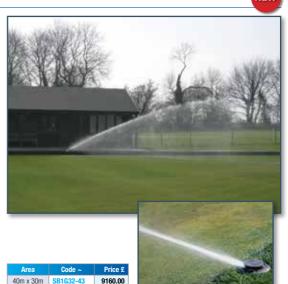

Fully automated watering for a top quality surface

For the best results with the minimum of effort an automated popup sprinkler system can be installed. This package includes 4 popup sprinklers, each one located half way down the side of the green, pipework that is located in the roll off gutter and a pump, tank and automatic controller. A rain sensor is also included to reduce watering costs.

A full specification and layout plan is available on our website.

What you get

- 5,000 litre irrigation storage tank with mains water connection and Water Regulation compliance kit
- Multi-stage stainless steel pump with autostart, pre-assembled and tested
- · Irrigation controller with rain sensor
- Pipework from pump to green with necessary fittings
- · 4 Popup sprinklers

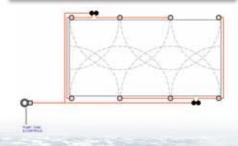

Manège Package

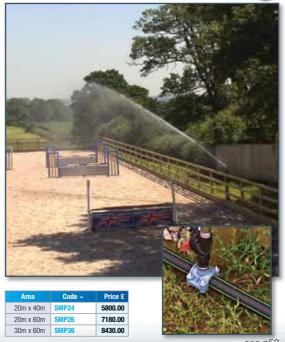

Automated dust suppression

Large sprinklers are located around the perimeter fencing, throwing water into the manège. Includes pipework and a pump and storage tank. An automatic controller will bring the irrigation system on early in the morning to water the manège, keeping dust levels down. A full specification and layout plan is available on our website.

What you get

- · Large tank to comply with the Water Regulations
- Single phase pump unit to provide the appropriate pressure
- · Pipework and valve boxes for perimeter watering
- Automatic controller with the option of wi-fi connectivity

NEW

NEW

Rain King Travelling Sprinkler

Ideal for keeping pitches watered during dry weather, watering half of the pitch at a time.

The travelling sprinkler is placed at one end of the pitch and the steel wire run out to the other end of the pitch. Once operating the sprinkler slowly travels down the length of the pitch, shutting off once it has reached the other end. Watering can be done at night to minimise evaporation. One half of the pitch is watered each time, so an entire pitch can be watered over two nights.

Flow: 3,000 - 4,100 l/h.

Diameter: 34 - 38m @ 3 - 7 bar

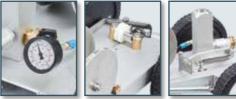

Pumped supply normally required.

135m steel cable allows 183m long watering run.

 $3/4"\,\text{BSPF}$ inlet fitting - use 1" hose to minimise pressure losses.

Code ~	Price £
EHTS4	1730.00

Travelling Sprinkler Package

Provides pressure and flow for watering pitch

Travelling sprinklers normally require a pumped system to provide sufficient pressure and flow due to the large amounts of water required to water a pitch.

A large water storage tank fills when the system is not operating, allowing the pump to irrigate half of the pitch overnight. The process is then repeated the next night on the other half.

Incudes 50m of underground pipe to run from the pump to the valve box at the end of the pitch.

A full specification and layout plan is available on our website.

- Travelling sprinkler
- 100m hose and heavy duty trolley
- Hydrant box and 50m underground pipe
- Single phase auto-start pump
- 20,800 litre tank with air gap

Sports Pitch Strip Sprinkler Package

A low cost method of watering a complete football or Rugby pitch in 10 days using a standard water supply.

Two options are available, for grounds where the pressure and flow are good the system can be run directly from the mains water supply; for faster watering or for poorer supplies a pumped system is available.

The package consists of temporary sprinklers run across the width of the pitch.

The pumped system also includes an underground pipe to run down one side line with 5 take-off points.

	Code ~	Price £
Mains	STPW6	3990.00
Pumped	STPW-P	7610.00

What you get (mains)

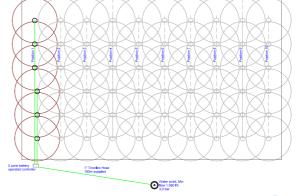

- 6 sprinkler sleds to cover pitch width
- · Connecting hose and 2 hose reel carriers
- 2-zone battery controller to water 3
 sprinklers at a time

What you get (pumped)

- · 7 sprinkler sleds to cover pitch width
- · Connecting hose and hose reel carrier
- 5 take-off points and 150m underground pipe

Reel Irrigators

Reel irrigators are designed to water large grass surfaces such as playing fields or football or rugby pitches. Units will require a water storage tank and pump to provide enough pressure. Reel irrigators incorporate a drum of hose which is unwound manually. Once the irrigator is operating, the hose will automatically be pulled along the grass until it returns to the unit.

Speedy Rain 32/90

Hose diameter x length: 32mm x 90m Output range: 1.68 – 3.60 m³/hr Connection pressure: 3.5 – 5.0 bar Wetted width: 26 – 37m Rewind speed: 10 – 30 meters / hour

Speedy Rain 40/130

Hose diameter x length: 40mm x 130m Output range: 2.94 – 7.44 m³/hr Connection pressure: 4.4 – 8.0 bar Wetted width: 26 – 44m Rewind speed: 10 – 40 meters / hour

Order Information

Terms and Conditions

These Terms of Business are in addition to our Terms and Conditions of Sale. All orders placed with Access are subject to our Terms and Conditions of Sale unless agreed in writing by a director of Access Irrigation Ltd. A full copy of the Terms and Conditions of Sale is available on request.

Placing your Order

Please indicate the quantities, reference code and description on all orders. Please also include a contact phone number.

Phone: 01788 823811

We are open Monday - Friday 8.30am - 5.00pm or leave a message outside office hours.

Email: sales@access-irrigation.co.uk

A convenient way to order, 24 hours a day.

Online: www.access-irrigation.co.uk

All components are listed online for fast and easy ordering.

Collection

For a speedy service, phone your order through beforehand.

Payment Terms

New Customers	We require payment with order.
Existing Customers	Existing customers may open a credit account - details are available on request.
We accept payment by	Cheque, or the following credit and debit cards.
Neveran VISA	Maestro

Damaged Goods

Any goods delivered damaged must be signed for as damaged and notified to us in writing, within 5 days; otherwise no claims can be accepted.

E&OE: Access reserve the right to change products and prices at any time. No part of this Catalogue may be reproduced by any method without prior permission from Access Irrigation Ltd.

FREE Economy Delivery

Catalogue orders over £125 (ex VAT) will be despatched by post or carrier free of charge if paid by credit / debit card. This service will normally take 3 - 5 working days longer than the Standard service. The order will generally be held until all items are ready for despatch.

Direct despatch (~) items and bulky/high value items are excluded.

STANDARD Delivery

Our standard service ensures that orders are normally despatched within 48 hours (over 85% are despatched in 24 hours). Items are despatched using fully traceable 24hr carriers.

Delivery charges for orders paid for by credit/debit card: £0 - £250 £15.95

£250 + £24.95

For a faster service, orders will be part despatched if any items are out of stock.

Direct despatch (~), special order (+), heavy and bulky items may take longer and may attract a surcharge. Pallet deliveries: items marked ++ are built to order and will be despatched on a pallet at additional cost.

NEXT DAY Delivery

For really urgent orders, we can arrange for a next day delivery service for items in stock. Please ring through your order to check the stock situation. A delivery surcharge will apply.

Other Terms

Deliveries to remote areas (eg. Scottish highlands), Northern Ireland, Eire and non-mainland addresses will be charged at cost.

Orders under £125

For non-priority orders under £125, paid by credit / debit card, the following charges apply:

Under 1kg	1st class post	£4.95
Over 1kg	Economy carrier	£9.95

Special Terms

Items marked + or ++ in the catalogue will be made/ purchased to order, and may take a little longer to despatch. Items marked ~ are purchased to order so orders with these items may take a little longer to despatch.
